Date: 09/11/2018

Alicona invite you to our next live webinar: "μCMM - Opening New Doors for Production Measurement Technology" on November 27th, 2018. Franz Helml, Head of R&D and "mastermind" of the optical 3D coordinate measuring machine, and I look forward to presenting the Alicona μCMM to you.

Learn more about the technical achievements, how demanding materials are measured without contact and which advantages are combined from tactile and optical metrology. Further, we will demonstrate the working principle of SmartFlash 2.0, the modulated illumination technology to measure matt and polished surfaces. See in a live measurement how a single sensor can measure dimension, position, shape and roughness of a component. We will also show you the latest development of our core technology Focus-Variation, the optical measurement of micro holes.

Registration options and further information on the [webinar](https://www.aliconona.com/en/opening-new-doors-for-production-measurement-technology/) can be found at: <https://www.aliconona.com/en/opening-new-doors-for-production-measurement-technology/>.

The webinar will take place on Tuesday, November 27th, 2018 at 10 am (in English) and at 2 pm (in German).

*No time on this day? No problem - register anyway and get the link to the webinar recording.*

I am looking forward to your participation in the upcoming webinar!

The banner features a central image of an Alicona μCMM machine. On the left, a blue diagonal banner contains the text "November 27, 2018" and "LIVE WEBINAR". On the right, a grey banner contains the text "μCMM", "Opening New Doors for Production Measurement Technology", and a blue button that says "View Live-Dates and Register for the Webinar".
