

Control 2019, The Quality Assurance Trade Fair

Control 2019, the international trade fair for quality assurance returns to the Stuttgart Exhibition Centre from the 7th-10th of May. The trade show is a universally recognised technical event that brings together pioneering suppliers and expert users of industrial technologies, products, and system solutions in the the quality assurance industry. The trade show allows for each exhibitor to demonstrate their knowledge-driven expertise and products.

VERUS ARE EXHIBITING AT CONTROL 2019

Verus Metrology Partners are returning to the world leading event in 2019. Where we will be displaying our Turnkey Metrology Fixture Solutions in Exhibition Hall 4 - Booth 4203-1. From Moldflow Analysis and Sub-Contract Metrology to Bespoke Metrology Fixtures, the Verus team will be demonstrating how to add value to your product development.

Accompanying our Bespoke Metrology Fixture demonstrations, V-FIX4 and V-FIX8 will also be on display at the Verus booth. Our patented V-FIX is an off-the-shelf product that allows for the fast, interchangeable pre-assembled holding of components. It allows users to build multiple modules offline and drop them into the V-FIX4 frame when needed. Attendees of the event can see first hand, a perfect solution for their product design and development phase.

VERUS ARE LAUNCHING A NEW PRODUCT AT CONTROL 2019

This year, we will have the addition of our much anticipated Auto-Rotational Fixture on public display, for the first time at Control 2019.

Verus Metrology Partners have pioneered an ever-evolving business model in response to both the current and future needs of clients since the founding of the company in 2008. Partnering with global clients has directed this evolution and allowed Verus to support a culture of continuous innovation.

Advancing the current capabilities of our fixtures through automation will not only allow metrology engineers to achieve multiple orientations without operator interaction, namely eliminating non-value-added activities but will also align inspection and metrology to the Principles of Lean.

"Thinking about the future and addressing matters that are important to our clients, such as Just-in-time (JIT) delivery and a higher return on investment, is core to everything we do," says Technical Director Michael Nugent.

VERUS ARE TAKING THE NEXT STEP IN AUTOMATION

Transforming from static and rotational fixtures, Verus are looking forward to taking the next step in automation with our clients. The development of our self-sufficient and independent smart fixture solutions allows engineers to continue with their high value-adding daily responsibilities.

We look forward to displaying our passion for metrology through our advanced products that are designed for companies seeking value from their development stage right through to production. Our experts create robust and trusted metrology solutions that allow our partners to further accelerate their products.

Over the years, exhibitors have taken advantage of the trade show to present their products to a wide-based, highly-skilled audience. Trend indicators along with advanced measuring technologies are showcased as quality assurance and industrial production continue to intertwine. The Control international trade fair resumes its place this year as the number one trade show. Covering all aspects of the key issue of quality assurance while offering complete QA solutions in hard and software.

The Verus team look forward to returning to Control 2019 and interacting with, both new and existing clients. You can still register for your free day pass coupon HERE.
