### JBO GAUGES SUCCESS

Stocdon Limited, Tooling Specialists in Cheltenham, offer Europe's premier line of precision thread gauges; over 70,000 items, from Stock.

As you can see from our NEW website, we can deliver more than 7,000 different thread dimensions and tolerances, covering all kinds of threads from 1 to 250 mm diameter. All are high precision and have enormous resistance to wear.

#### 3 x Perfect

Going one step further, the development of MultiCheck dramatically cuts the time taken in checking threads over a specified depth by measurement with a depth gauge. The MultiCheck has a depth measuring sleeve which is screwed in and the depth up to 4 x nominal thread diameter can be read easily off the sleeve; if this is not sufficient, there's a Vernier MultiCheck with 0.1mm resolution, or a digital readout MultiCheck with 0.01mm are available.

#### Up for the job

Extremely hard-wearing, their line of TiCN coated, calibrated HSS Thread Plug Limit gauges are the choice for 10 x gauge life, excellent anti-friction properties, and reduced checking. You can be assured that all JBO Thread Gauges come calibrated and certified by DKD (UKAS) which is the internationally recognized, accredited procedure that JBO use. Stocdon are happy to supply further information regarding DKD/UKAS testing/calibration.

#### Quality Matters

Providing better than average tooling for over 70 years, JBO of Germany have been successfully making high quality Thread Gauges. Continual development of grinding and lapping techniques has resulted in above-average surface finish of the thread flanks, so JBO thread gauges are particularly good because of their high precision and enormous resistance to wear. The bottom line of course can only be quality.

The attraction for Stocdon as sole UK agents is that, as with all of our tooling, knowing that quality is top priority for manufacturers such as JBO, we can safely assure our customers that they have purchased great, cost-effective, problem-free equipment.

And our customers, from engineering merchants to valve industry to motorsport to aerospace all agree that "...Stocdon have the largest thread gauge programme ever seen of standard products, with quick delivery, too", and "...the best prices in the UK, with Plug Gauges less 20% and Ring Gauges less 45 – 50% of market prices."

The mere name of JBO throughout Europe is proof enough that these gauges are manufactured, calibrated and distributed in accordance with DIN EN ISO 9001, conforming to national and international standards. Inspection and documentation are carried out at high-tech measuring machines in climate-controlled conditions separately from production.

Stocdon, as tooling specialists, are proud to be associated with JBO of Germany, who consistently provide us and our customers the very best in Thread Gauges, Thread Milling tools & Dies.
