

The PPE Specialists

Keeping your workplace safe

With coronavirus-type infections and the resulting social distancing becoming the new normal, organisations are looking for more ways to limit face-to-face interaction. Now, with QVS's tried and tested vending solutions, you can safely dispense gloves, masks, hand sanitisers and wipes to your workforce and visitors.

Our proven, robust technology gives your staff and customers controlled 24/7 access to the PPE they need in order to stay safe. Take our VersaoLift machine which has up to 64 product locations. Users simply identify themselves to the machine using a personalised smart card and make their selection – the innovative lift and delivery system dispenses the PPE.

Stocking levels and usage information can be monitored remotely, which means you need never worry about running out of the vital protective items your organisation relies on.
